TrendTeller Stock Insights

Welcome to TrendTeller Stock Insights! 🙌

🌟 Discover Market Sentiment with Ease! 🌟

This application seamlessly integrates sentiment analysis, topic modeling, and correlation analysis with interactive data visualizations in a single, intuitive dashboard. By analyzing sentiment from both news headlines and StockTwits comments, it uncovers hidden trends and their correlations with stock prices and trading volumes. Through a user-friendly interface, the dashboard provides real-time visualizations that not only reveal sentiment trends but also highlight the relationship between public opinion and stock market performance. Whether you're an investor, analyst, or researcher, this tool empowers you with a data-driven approach to understanding the forces shaping the financial landscape, making it easier to make informed decisions.

🚀 Key Features:

- 🔍 **Sentiment Analysis:** Understand public sentiment on news and StockTwits comments.
- 📊 **Topic Modeling (LDA):** Identify key themes and ongoing discussions.
- 🌈 **Data Visualization:** Visualize both topics and sentiment trends in a clear, interactive way.

Topic Modeling LDA Analysis

Select a CSV file to analyze

news/2024-10-04_Trump_news_data.csv

Adjust LDA Parameters

Run LDA

1. Select a news/ comments csv file
2. Adjust LDA Parameters (Optional)
3. Click the button “Run LDA”

Parameter Name	Description	Range	Default Value	Simple Explanation
Number of Topics (num_topics)	The number of distinct topics to generate in the topic model.	2 to 20	5	How many topics the model will generate.
Filter out tokens (no_below)	Removes words that appear in fewer than this number of documents, filtering out rare terms.	1 to 20	5	Removes very rare words from the analysis.
Filter out tokens (no_above)	Filters out words that appear in more than this fraction of documents, removing very common terms.	0.1 to 1.0 (fraction)	0.5	Removes extremely common words to avoid noise.
Chunk Size (chunksize)	Number of documents to process in each chunk during the training.	50 to 500	100	Breaks the data into smaller batches for easier processing.
Number of Passes (passes)	Number of complete passes through the corpus during model training.	5 to 20	10	The model revisits the data multiple times to improve topic identification.
